

Get your new iSoundCap™ started

<http://www.isoundcap.com/support/>

Recommended installation - step by step

Thank you for purchasing iSoundCap™. Please follow the few steps illustrated in this guide and you'll be up&running in no time. Enjoy your hat and many many hours of wire-free music.

1

Gather all the parts you need.

You should have:

1. Your iSoundCap™
2. One wire-spool (if you were supplied with two, the second would be a spare)
3. Your headset (most likely ear-buds)
4. Your iPod® (either Nano or Shuffle™)

2

Hold the wire-spool with one hand and the headset connector with the other. Keep the headset connector away from the spool: around 1.5" of free cord for iPod® Shuffle™ and 2.0" for iPod® Nano (Figure 2). Wind up the cord around the spool starting from the top notch.

3

Keep winding the cord up as per Figure 3.

Note: Cord should be tight enough not to escape the top and bottom nicks, but not too stretched either (otherwise cord damage may occur over time).

4

Stop winding up the cord when the part of it hanging from the spool reaches a length close to 9.5" (measure just the cord, not the ear-pieces). As per Figure 4 both left and right earpieces should be at the same distance respect to the spool. Should the total hanging cord length be less than 9.5", unwind one loop from the spool.

5

Stop winding the wire corresponding to the left earpiece. Keep winding up the wire that corresponds to the right earpiece, until the hanging part of that wire approximates 4.5" in length (Figure 5). Even in this case, a slightly longer wire is preferable over a slightly shorter one (unwind if necessary).

6

Push the wire bundle into the elastic pocket. To ease the process, stretch the fabric by inserting a finger into the top opening of the elastic pocket (Figure 6).

7

Insert your iPod® into the player pocket. The headset jack

needs to point downwards. Once in place, make sure the stereo minijack on your iPod® is aligned to the opening at the bottom of the player pocket (Figure 7).

8

Plug your headset connector into the stereo minijack (Fig.8).

9

Open the Velcro® strap and run the left-earpiece wire along the strap in the middle (Figure 9).

10

Close the Velcro® strap adjusting it according to your head girth. As per Figure 10, the wire will be "sandwiched" between the two Velcro® parts.

11

Refer to Figure 11 to locate the stretchable loop inside the hat, next to the Velcro® strap (left side).

12

Stretch the loop and pass the left earpiece through it (Fig.12).

13

Your cap should now look like the one illustrated in Figure 13. Enjoy your iSoundCap™!

Remove your iPod® and headset from the iSoundCap™

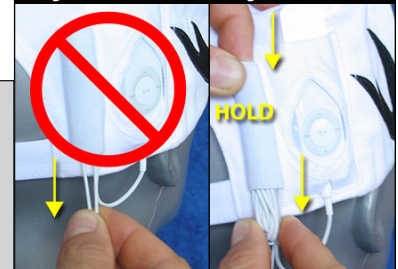

Best practice

To remove your iPod®, just disconnect the headset connector from the stereo minijack, then pull the player out of the pocket. Should you need to remove your headset, follow the procedure illustrated above in reverse order.

To remove the wire bundle from the elastic band, DO NOT pull the wires (doing what shown in Figure 14 damage may occur), instead hold the elastic pocket and push down with one finger from the top opening, then grab and pull the wire bundle as per Figure 15.
